## ENTRANCE

TO THE GRAND COUNCIL OF THE INTERNATIONAL  
FRATERNITY OF DELTA SIGMA PI:

GENTLEMEN:

We, the undersigned members of Delta Lambda Upsilon, do hereby petition for a charter to establish a chapter of the International Fraternity of Delta Sigma Pi on the campus of Mexico City College in Mexico 10, D.F., Mexico.

Organized in accordance with the high ideals of Delta Sigma Pi, and fully aware of the purposes, aims, and requirements of the Fraternity, the membership of Delta Lambda Upsilon Fraternity, in regular meeting assembled, voted unanimously to present this petition for consideration.

In seeking this affiliation, we pledge ourselves to uphold the Constitution and By - Laws of the International Fraternity of Delta Sigma Pi, and to adhere to the traditions of the organization, and to observe faithfully the rules and regulations set forth by the Fraternity.

Witness our signatures:

<i>Joseph J. La Cascia</i>	-	PRESIDENT
<i>Anthony J. O'Sannell</i>	-	SENIOR VICE PRESIDENT
<i>Raymond E. Ball</i>	-	JUNIOR VICE PRESIDENT
<i>Stanley F. Fuman</i>	-	TREASURER
<i>Anthony Rodriguez Jr.</i>	-	SECRETARY
<i>George H. Elledge Jr.</i>	-	HISTORIAN
<i>William E. Rodgers</i>	-	FACULTY ADVISOR

President

Dear Mr. Thompson,

Mr. Joseph S. La Cascia has asked me to state why I feel that the foundation of the Delta Lambda Upsilon Chapter of the Delta Sigma Pi Fraternity will be beneficial both to our college and to the Fraternity.

Our Department of Economics and Business Administration is one of our best and it attracts students from all over the United States and from some foreign countries. Men and women prepared in this Department are doing quite well in their respective fields, but it would seem to us that the formation of a professional business fraternity on the campus would prove to be a further stimulus to our students in achieving good scholarship while here and in locating good positions when they graduate.

Judging by the type of student who has so far applied for membership in Delta Lambda Upsilon, I should say that we can expect from the Chapter intensive efforts to hold to high standards of scholarship and personal conduct and that both our college and your Fraternity will have every reason to be proud of the record that present and future members will make.

I regret that I did not have more time to talk with you during your recent visit to the campus, but I hope that you will be down again soon and that I shall be able to spend more time with you and to tell you more about our college and how it came to be. In joining any group we like to feel that we are in position to make a very special contribution to that group while gaining from it the rights and privileges which membership covers. All of us on the Administrative Council are of the opinion that the foundation of Delta Lambda Upsilon will bring benefits to your organization while on our part

American Chamber of Commerce

both the interest of the students and the college in general will gain through this affiliation with a national business fraternity. Thanking you for your kind collaboration with our students and assuring you of our wish to be of service to your organization and to those who will represent it on our campus in the future, I am

Very sincerely yours,

*Paul V. Murray*

FVM-ms

It has been brought to my attention that the Chapter of Delta Lambda Upsilon of Mexico City College is seeking admission into the International Fraternity of Delta Sigma Pi.

Mexico City College is a serious educational institution established some years ago and considered the best American type college south of the border. The college has grown steadily under the counsel of excellent leadership and is becoming increasingly recognized throughout the Americas and Europe. The average enrollment per quarter varies from 800 to 1,000 students.

Should their petition be given serious consideration, I feel that your expansion into this picture would be a great step in international relations between educational groups of our country.

If you wish further assistance in this matter, please feel free to call upon us.

Sincerely yours,

*Henry A. Shute*

It would be difficult to find a more colorful history than that of Mexico and of the Indian peoples which are indigenous to Mexico. About ten or fifteen centuries ago, an migration of nomadic hunters across Bering Strait took place. Gradually, this influx spread southward as far as Mexico and other Latin American countries. Though simple tools made by these nomads have been unearthed in various regions of the Americas, little has been learned about the hunters themselves.

However, a great deal has been found out by anthropologists and archaeologists through research on the religious symbols, tools, architecture and decoration used by the people who

#### A HISTORY OF MEXICO

lived in Mexico about the time of the birth of Christ. The dwellers in the Valley of Mexico at that time were more than a representative agricultural society, for besides growing maize they were reaching higher levels of craftsmanship in weaving, in pottery-making, in working in stone and obsidian, and in the manufacture of adobe bricks for building.

A new tribe followed, bringing with it a greater knowledge of the arts of life. These people were the Toltecs. They produced much finer pottery than their predecessors and have won much recognition for themselves because of the carved titles they left behind carved out of finely carved stone. The same period saw other higher civilizations evolving, mainly in southern Mexico and Yucatan. Of these,

## A HISTORY OF MEXICO

It would be difficult to find a more colorful history than that of Mexico and of the Indian peoples which are indigenous to Mexico. About ten or fifteen centuries ago, an emigration of nomadic hunters across Bering Strait took place. Gradually, this influx spread southward as far as Mexico and other Latin American countries. Though simple tools made by these nomads have been unearthed in various regions of the Americas, little has been learned about the hunters themselves.

However, a great deal has been found out by anthropologists and archaeologists through research on the religious symbols, tools, architecture and decoration used by the people who lived in Mexico about the time of the birth of Christ. The dwellers in the Valley of Mexico at that time were more than a representative agricultural society, for besides growing maize they were reaching higher levels of craftsmanship in weaving, in pottery-making, in working in stone and obsidian, and in the manufacture of adobe bricks for building.

A new tribe followed, bringing with it a greater knowledge of the arts of life. These people were the Toltecs. They produced much finer pottery than their predecessors and have won wide recognition for themselves because of the sacred cities they left behind erected out of finely carved stone. The same period saw other higher civilizations evolving, mainly in southern Mexico and Yucatan. Of these,

the Mayas are perhaps the most famous, and justly so, for one of their contributions was the bringing forth of an extremely accurate calendar which was based upon long, careful observations of the sun, moon, and stars.

Archaeological history shows us that the Toltecs were displaced from the valley by other northern tribes of a less advanced state, c. 1300. Most notable of these newer tribes were the Aztecs, who took over much of the knowledge and ways of the Toltecs and added these acquisitions to a strong military and religious culture. By the latter part of the fifteenth century, they had gained mastery over the greater part of south central Mexico, holding lesser tribes under a sort of feudalistic system. The consolidation of regions and tribes into an Aztec empire was accomplished for the most part, under the leadership of Moctezuma I and Moctezuma II.

The capital of the Aztecs, Tenochtitlan, later renamed Mexico City, at its zenith contained upwards of one hundred thousand inhabitants: the total Indian population in all of Mexico is estimated to have been about six million. Yet Cortes conquered Mexico with only six hundred men! The year 1519 saw Cortes and his expeditionary force land at the present site of Vera Cruz and claim the new territory for Spain. After subduing the surrounding countryside, the Spaniards made an amazing march across the Sierra Occidental range and reached the central plateau. Moctezuma II (also spelled Montezuma), emperor of the Aztecs at the time, had

known for two years of the presence in the Americas of the white men and was not anxious to receive them in this capital. In spite of all he could do to keep Cortes away, the Spaniards entered the city successfully after a series of engagements with the Indians. After a period marked by strife, bloodshed, and an unbelievable loss of Indian lives, the Aztec capital finally fell on August 13, 1521, to the white conquerors or conquistadores as they were known. During the next few years southern Mexico and Yucatan were also lost to the Spaniards.

The Spaniards began a new order of things in Mexico with a great deal of vigor and promptness. Army posts were set up throughout the land. Accompanying military control was missionary zeal- the cry of conversion came from every Spaniard's lips. The old religions, which the Spaniards regarded as idol worshiping, were crushed and the massive Indian temples razed to the ground in the name of the Father, the Son, and the Holy Ghost. Hundreds of thousands of Indians were baptized in the Catholic faith, bringing about a remarkable change; for in less than a generation after the Conquest, educated Indians were reciting in Latin and finding it difficult to explain their ancient calendar to interested missionaries. But in the remote regions the old Indian religion survived and is still practiced today.

For nearly three centuries New Spain, as Mexico was then called, was ruled by a Spanish viceroy. He was assisted by an audiencia- an administrative and judicial tribunal- which

served as a judicial court of appeal and gave advice in the administration. Of the many positions and offices held, the ayuntamientos or town councils were the only democratic structural elements of government, but their power was limited. The prevailing unit of agricultural economy and rule was the encomienda, a device for Christianizing the natives, subjecting them to the Crown, and rewarding the conquistadores. One or more villages were given in trust to an individual, who had the right to collect tribute and exact labor from the inhabitants. Thus a feudal pattern of land tenure developed.

Spain and the Spanish monopolized government offices, foreign trade, and ecclesiastical power. The establishment of manufactures was discouraged or prohibited and the native culture blighted by this abuse of power. The building of roads and harbors, the encouragement of literature and art, the beautification of cities, and the establishment of higher schools by a strong government- these virtues of paternal rule could not offset the growing demands for self-government.

With the declination of Spanish power in Europe, an added impetus was given the movement for independence in Mexico. France invaded Spain in 1808, and the Spanish king, Ferdinand VII, yielded to Napoleon, thus leaving the Spanish colonies without a recognized European ruler. For many years the criollos (native-born Mexicans of Spanish blood) had resented Spanish rule of Mexico and now, at last, they finally had a chance to do something about it. Moreover, a few of the educated people of Mexico had been reading the

literature that had helped to bring about the French and the American revolutions. They knew what was meant by liberty and the rights of man. The Mexican revolution was, in part, a struggle between the two top classes. In part, too, it was an effort to give justice and liberty to the people. But a hundred years were to lapse before these ideals were to come about.

Miguel Hidalgo, priest of a small parish in the town of Dolores, called upon his Indian followers to rise against their native rulers on September 16, 1810. Crying out, "Long live Our Lady of Guadalupe! Long live Independence!" he urged the Mexicans to drive out their foreign rulers. But in a few weeks, because of faulty planning, disorganization, and a lack of military equipment, Hidalgo's followers were defeated by government troops.

This was the beginning of Mexican Independence although the fight was to last for years until 1821. To this day, September 16th is celebrated as Mexican Independence Day and, on each anniversary, the president of the republic rings a bell in Mexico City and gives the Grito de Dolores, the cry of Padre Hidalgo.

In 1815, Padre Morelos, another famous Independence leader, was captured by treachery and, like Hidalgo, shot to death. It was not long until an ambitious soldier by the name of Agustín de Iturbide rose to power and for ten months, in 1822-23, ruled as emperor of Mexico. It is true that now Mexico was independent of Spain, having by treaty acquired

freedom in 1821, but the power to rule the common man had merely been shifted from the Spanish Crown to the white people of the country. The many classes with their unequal privileges remained as they had been before. As usual, the peones (Mexican peasants) bore the brunt of economic, political, and social inequality. After Iturbide was driven from power, the next generation of Mexico's history was merely a struggle among ambitious, selfish military men who lacked experience in self-government.

In 1835-1836, the Texans took advantage of the weakness of this situation by bearing arms against the Mexican government, which owned the land. At the close of that struggle Mexico was forced to give up the territory which is now Texas and parts of the southwest. Hostilities broke out again in 1846, but this time between the United States and the Mexican government. After a two-year war, Mexico yielded the land that was to form the states of California, Nevada, Wyoming, Utah, Colorado, Arizona, and New Mexico. During most of this troubled period the name of General Antonio Lopez de Santa Ana can be found in almost every machination and activity of the Mexican government.

In 1860, Benito Juarez, a Zapotec Indian, came into power, aiming to improve the economic conditions of his people and to lessen the political strength of the church. The rule of Juarez was interrupted by a dramatic event when France and Great Britain broke off relations with Mexico because of disputes over the repayment of certain loans. This gave to

Napoleon III, emperor of France, an opportunity to extend his power into the western hemisphere, and subsequently a French army arrived in Mexico. In 1864, Maximilian of Austria was crowned emperor of Mexico, but his rule was doomed from the start. A brief and tragic struggle followed, in which Maximilian was opposed by the forces of Juarez, captured, and shot. Napoleon's actions had resulted in utter failure and caused Mexico unneeded suffering.

The last third of the 1800's and the first ten years of the 1900's were taken up by the rule of Porfirio Diaz. Though he was a soldier and a man of the people, Diaz ruled with an iron hand, becoming a virtual dictator while supporting the classes that had ruled Mexico for many generations. For him Mexico was a country which should be patterned after European tradition. Diaz showed little interest in the Indians except to see that they were kept quiet and at work, but he did encourage foreigners to buy up Mexican oil fields, mines, and farms. Thus, Porfirio Diaz is credited with reviving Mexican mining, building its railroads, and establishing a high degree of law and order. Unfortunately, education was neglected and nothing was done to solve the problems of foreign policy which Diaz was creating.

The revolution of 1910, which overthrew the aging Diaz, was a real revolution in the sense that it aimed at making a new kind of society, one in which the Indian would be free and the country would belong to the common Mexican. It was led by Francisco Madero, a member of the upper class, who

succeeded in forcing Diaz out of the country. But almost at once Madero had to contend with an uprising of the followers of Felix Diaz, a nephew of the ex-dictator. General Victoriano Huerta, who had supported Madero, treacherously deserted him and went on to become president of Mexico. While Huerta served as president, from 1913 to 1914, one leader after another tried to gain control, while simultaneously, trouble with the United States led to American troops occupying Vera Cruz for a brief period. Then in 1914, Venustiano Carranza led a revolt against Huerta, successfully forcing him to resign the presidency.

For five years, from 1915 to 1920, Carranza served as president, but two of his followers left him and began to cause trouble. One in the north, a popular leader known as Pancho Villa, terrorized the population and once crossed the border, raiding and pillaging in the United States. In the south an Indian leader, Emiliano Zapata, also led his followers against Carranza in an effort to divide the land among the common people.

In 1917, Mexico adopted a new constitution, internationally heralded as being truly democratic, which is in operation today. In 1920, Carranza was killed in a revolution led by General Alvaro Obregon. The new president proved his capability by bringing about many reforms. One of the most important advances of the Obregon regime was in the promotion of education. General Plutarco Elias Calles, who became president in 1924, had difficulties with the Church and with

a program to build and improve on the past. Agriculture was

the foreign owners of property in Mexico. In 1928, Obregon was again elected president, but was slain before he could take office, and less than two years later, Ortiz Rubio was elected president, but in 1932 he was forced to resign and was followed by General Abelardo Rodriguez.

In 1938, when the government seized the oil properties of the British and American companies, Britain and the United States protested, but Mexico stood firm, though it lost many of its markets for oil abroad. During World War II, after several Mexican ships had been sunk by German submarines, war was declared on the Axis Powers in June, 1942, and the country was led through the turbulent war years by General Avila Camacho, who had succeeded Cardenas in 1940.

Mexico took immediate steps to prepare itself for its part in the war. The government seized Axis-owned properties in Mexico and installed Mexican managers under government supervision. Mexican raw materials were shipped in great quantities to the United States, where they were converted into finished products to help in the war effort. Many Mexican men enlisted in the armed forces of the United States and served faithfully and honorably. A trade agreement between the United States and Mexico removed restrictions on the importation of Mexican oil into the United States, greatly aiding the crying need for oil of the war-gearred industry.

Miguel Aleman, Mexico's first real non-military president, took office in 1946 after a peaceful election and presented a program to build and improve on the past. Agriculture was

not forgotten, but emphasis was placed more on the development of irrigation and technical improvements. However, industrialization received the greatest emphasis, and to achieve this goal, native and foreign capital received many inducements to invest. Firms were given tax reductions or exemptions for a term of years, causing a substantial rise in capital investments and expansion.

Mexico elected its second civilian president, Adolfo Ruiz Cortines, in July, 1952. Cortines immediately began a vigorous campaign to moralize public life. Those who didn't measure up to the new standards of financial integrity and honesty were fired. Cortines has worked to bring into balance the expansions that took place under Aleman. He has sought to crush price rises by stimulating the production of basic necessities and to bring about a more equitable distribution of national income.

Democracy has had its failings in Latin America through the lack of racial unity, a middle class, communication facilities, experience in self-government, and education. A modern spirit has been largely responsible for Mexican progress in recent years despite the fact that its physical resources and geographic environment have been far from the best. In this setting, the republic has been slowly working its way toward political democracy and economic health.

## HISTORY OF MEXICO CITY

During the Fifth century, the Aztecs, wandering southward, were instructed by their high priest to watch for a sign from the gods which would indicate the site where they were to settle and establish a city. This sign, which was an eagle perched upon a cactus with a snake in its beak, appeared to the wanderers when they reached the Valley of Anahuac. From the banks of a lake in the valley, the pilgrims witnessed the prophesied sign. On what was then an island, the Aztecs built their great city, Tenochtitlán. Founded in 1325, the Empire flourished and spread outward across the lake to the hinterlands. For the next two centuries the Aztecs dominated the scene, accumulating great wealth and advancing their civilization. A HISTORY OF MEXICO CITY

Cortés, with his band of 500 Spaniards, arrived and began his conquest. He and his men had fought their way from Vera Cruz to the summit of the mountains which ring the city. From this point, the Spaniards were invited by the Aztec ruler, Montezuma, to visit Tenochtitlán.

The purposes of Cortés' expedition to Mexico were to found new colonies and exploit them by obtaining mineral wealth, and to convert the Indians to Christianity. Because of the Spaniards' insatiable nature, they could neither wait for the gradual conversion of the Aztecs, nor be content with slowly stripping them of their gold and silver. Both these aims were attempted almost immediately, with the result that in 1520 the Aztecs rebelled, driving Cortés and his party out

## HISTORY OF MEXICO CITY

During the XIVth century, the Aztecas, wandering southward, were instructed by their high priest to watch for a sign from the gods which would indicate the site where they were to settle and establish a city. This sign, which was an eagle perched atop a cactus with a snake in its beak, appeared to the wanderers when they reached the Valley of Anahuac. From the banks of a lake in the valley, the pilgrims witnessed the prophesied sign. On what was then an island, the Aztecs built their great city, Tenochtitlán. Founded in 1325, the Empire Flourished and spread outward across the lake to the hinterlands. For the next two centuries the Aztecs dominated the scene, accumulating great wealth and advancing their civilization. But in 1519, Hernán Cortes, with his band of 500 Spaniards, arrived and began his conquest. He and his men had fought their way from Vera Cruz to the summit of the mountains which ring the city. Upon reaching this point, the Spaniards were invited by the Aztec ruler, Moctezuma, to visit Tenochtitlán.

The purposes of Cortes' expedition to Mexico were to found new colonies and exploit them by obtaining mineral wealth, and to convert the Indians to Christianity. Because of the Spaniards' impetuous nature, they could neither wait for the gradual conversion of the Aztecs, nor be content with slowly stripping them of their gold and silver. Both these acts were attempted almost immediately, with the result that in 1520 the Indians rebelled, driving Cortes and his party out

of the city in a bloody battle. The following year, however, Cortes returned with reinforcements, captured Cuauhtémoc, Moctezuma's successor, and thus brought about the surrender of the Aztec capital. Tenochtitlán (named by the Spaniards "Mexico"), then became the capital of New Spain.

Throughout its long history Mexico has been the scene of bitter warfare and bloody revolutions. Before the Conquest, untold numbers of people were sacrificed to the gods. Rivers of blood were spilled in countless battles. Upon the arrival of the Spaniards, an alien religion was established at the point of the sword, and kept alive by the thrust of the Inquisition.

Within a short period of time after the fall of the Aztec Kingdom, the city became a veritable heap of ecclesiastical structures. But in the wake of the Conquest came national independence from Spain, and a reaction to the impositions of religion. Pride in city and nation to a great degree superseded dedication to God. Civic betterment rather than spiritual glorification became the order of the day. Public buildings rose upon the foundations of former convents, and torn-down churches made way for broad avenues. Destruction of church property on a large scale really began after Maximilian's death in 1867 when Benito Juárez established himself as President of the Republic of Mexico. During his reign, hundreds of churches and convents in Mexico City and the country were confiscated and turned into public institutions such as schools, libraries, and museums.

Following Juarez' regime, an era of virtual dictatorship was ushered in with the advent of Porfirio Diaz. For 35 years (from 1876 to 1911) this "Iron Man of Mexico" carried through a program of gigantic proportions in a long-range attempt to improve the industrial growth and economic wealth of the country. Consequently, countless improvements were made in Mexico City and other large centers of population, but not too much was done to better the lot of the working class. As a result of these pent-up forces, a revolt began in 1910, which ousted Diaz and brought about the adoption of what is considered the most perfect democratic constitution in the world. Designed to alleviate the economic and social problems of the majority of the Mexican population, this constitution of 1917 practically wiped out all remnants of the old ideas of colonialism and church-rule established by the Spanish conquistadores. Foreign capital was, and still is, welcomed into the country. At times, this process has resulted in international friction, but the overall scene has improved mightily.

Today, Mexico City is an intriguing international metropolis of some 3,000,000 inhabitants. Covering an area of 1200 square kilometers, the Federal District (which is composed of Mexico City and its suburbs) occupies the southwest portion of the Valley of Anahuac, at the breath-taking altitude of 7,349 feet. Popocatepetl and Ixtaccihuatl, two giant snow-capped peaks of volcanic origin, dominate the skyline of mountains surrounding the city.

As capital and largest city in the Republic, Mexico is clearly one of the most beautiful and stateliest cities in the Western Hemisphere. It is the residence of the president, seat of national government, site of the Archbishopric of Mexico, location of great institutions of higher learning, art galleries, museums, and is the center of cultural activities. Possessing all the attributes of a truly great city, it is at once the commercial, and transportation center of the nation. It is an international air terminal the focal point of the country's highway system, and is connected by rail with all but 5 of the 28 Mexican states.

Mexico City is a living example of contrasts. It is the only American city where the tenth-, sixteenth-, and twentieth-century civilizations walk hand-in-hand. Steel Skyscrapers adjoin mildewed Spanish churches. Colonial Buildings, mellowed with age, are brightened up by ultramodern murals. Nowhere in the world may one witness as distinct an interplay of great cultures: Aztec, Colonial Spanish, and Modern. Perhaps these are some of the reasons Mexico City holds such an irresistible charm internationally that it is sometimes referred to as "The Tourist Capital of the World."

## MEXICO CITY COLLEGE

### Its History

Mexico City College was founded in June, 1949, by Henry L. Cain, Superintendent of the American School Foundation, and Paul V. Murray, Principal of the High School department in the same institution. Since its beginning the college has been a non-denominational institution of higher learning and, since 1949, has been greatly influenced by the system of education found in these American colleges which have emphasized the revival of a strong liberal arts curriculum. The college is chartered under the laws of Mexico as a non-profit corporation (Asociación Civil).

#### A HISTORY OF MEXICO CITY COLLEGE

Although the college has undergone many changes since its founding, it still reflects the wide experience of its organizers, whose long association with young people of many nationalities, races, classes, and conditions helped to strengthen their belief in the eternal values which are inherent in western society, culture and religion.

The end of the war in 1945 brought the College to the attention of many educators and institutions in the United States. Among the latter was Ohio State University, which sponsored the idea of a Winter Quarter in Mexico. Other well-known schools which take advantage of the unique facilities offered by Mexico City College in the field of Latin American studies are Denver University, Georgetown University, the University of Notre Dame, George Peabody College and Indiana University. These institutions have developed

## MEXICO CITY COLLEGE

### Its History

Mexico City College was founded in June, 1940, by Henry L. Cain, Superintendent of the American School Foundation, and Paul V. Murray, Principal of the High School department in the same institution. Since its beginning the college has been a non-denominational institution of higher learning and, since 1948, has been greatly influenced by the system of education found in those American colleges which have emphasized the revival of a strong liberal arts curriculum. The college is chartered under the laws of Mexico as a non-profit corporation (Asociación Civil).

Although the school has undergone many changes since its founding, it still reflects the wide experience of its organizers, whose long association with young people of many nationalities, races, classes, and conditions helped to strengthen their belief in the eternal values which are inherent in western society, culture and religion.

The end of the war in 1945 brought the College to the attention of many educational institutions in the United States. Among the latter was Ohio State University, which pioneered the idea of a Winter Quarter in Mexico. Other well-known schools which take advantage of the unique facilities offered by Mexico City College in the field of Latin American studies are Denver University, Georgetown University, the University of Notre Dame, George Peabody College and Indiana University. These institutions have developed

for either summer or winter sessions plans which broaden the background of their students by means of projected registration for one or more quarters of their undergraduate career.

Approval of the College under the terms of Public Law 346 in 1946 (and later approval under Public Law 530) started an influx of veterans which resulted in considerable expansion and growth. The original junior-college structure based on the semester system gave way to a four-year liberal arts curriculum based on the quarter system. In June, 1947, further development led to the foundation of a Graduate School which ever since has dedicated itself to the attainment and preservation of the highest standards of scholarship both in teaching and research. Its chief emphasis has been on Latin American Studies, and it now offers the Master's degree in seven distinct areas of specialization.

Until March, 1954, the College was housed in various buildings in the Colonia Roma section of Mexico City. At the beginning of the spring quarter of that year, classes were begun in a new location at Kilometer 16 of the Mexico-Toluca Highway, the continuation of the historic Paseo de la Reforma, just beyond the exclusive residential section known as the Lomas de Chapultepec (Chapultepec Heights). Here, for the first time since 1946, the institution has brought its activities together into a well-knit organization. The campus comprises some twenty acres of land, much of it covered with beautiful trees. Approximately one-fourth is flat land while the rest is barranca (ravine), most of it

quite usable. There are many magnificent views of the Valley of Mexico, the massive volcanoes--Ixtaccihuatl and Popocatepetl--and the beautiful mountains that surround the city. The entire college is housed at the new site.

Now firmly established in its new location, the college will continue to improve its standards of scholarship and its work of international education. Sharing, as they do, the same vitality and dynamics that characterize their host country, the administration, faculty and student body are united in a common effort to further the growth of the customs and traditions which make Mexico City College unique among educational institutions of the Western Hemisphere.

## THE DEPARTMENT OF ECONOMICS AND BUSINESS ADMINISTRATION

Mexico City College emphasizes an American oriented education within the cultural environment of Latin America. The international aspect of education offered to its students is a tremendous asset to anyone contemplating a business career in Latin America. Close cooperation with the Banca de Mexico (the equivalent of the United States Federal Reserve System) and the utilization of its personnel gives the college's economics and business administration departments an insight into the Latin American business world not obtainable elsewhere. The field of learning at Mexico City College is further extended by the opportunity to grasp a liberal education. By living in a foreign country, one obtains the ability to adapt oneself

### A HISTORY OF THE ECONOMICS DEPARTMENT

The department of Economics and Business Administration was formally organized in 1946 when the college was expanded to offer the four-year Bachelor of Arts degree. Prior to this, however, when the college had been a junior college offering the A. A. degree, the department of Commerce had been one of the main points of the Social Science major. The purpose of this expansion was to provide the student with a more solid foundation in both theoretical, practical economics, and business with emphasis on the increasingly important role which the Latin American countries are playing in the world economy. However, while these departments are mainly concerned with the training of suitable candidates for business and trade

## THE DEPARTMENT OF ECONOMICS AND BUSINESS ADMINISTRATION

Mexico City College emphasizes an American oriented education within the cultural environment of Latin America. The International aspect of education offered to its students is a tremendous asset to anyone contemplating a business career in Latin America. Close cooperation with the Banco de Mexico (the equivalent of the United States Federal Reserve System) and the utilization of its personnel gives the college's economics and business administration departments an insight into the Latin American business world not obtainable elsewhere. The field of learning at Mexico City College is further extended by the opportunity to grasp a liberal education. By living in a foreign country, one obtains the ability to adapt oneself to the habits and customs of different countries and their people.

The department of Economics and Business Administration was formally organized in 1946 when the college was expanded to offer the four-year Bachelor of Arts degree. Prior to this, however, when the college had been a junior college offering the A. A. degree, the department of Commerce had been one of strong points of the Social Science major. The purpose of this expansion was to provide the student with a more solid foundation in both theoretical, practical economics, and business with emphasis on the increasingly important role which the Latin American countries are playing in the world economy. However, while these departments are mainly concerned with the training of suitable candidates for business and trade

in the Latin American countries, stress is also laid upon the languages, customs, and cultures of the Latin American peoples.

Until 1954, the school was located on San Luis Potosi, in the downtown business district of Mexico City where a subsidiary of the Business Administration department is still maintained for the training of bi-lingual stenographers and secretaries. However, the gradual expansion of the school, due largely to the increased need for trained Americans in the field of Foreign Trade, necessitated more spacious quarters, and in September of 1954, the present campus on the Mexico-Toluca highway was occupied.

Concurrent with the expansion of the school, the department of Economics was enlarged. Licenciado Alfredo Ramos, Head of the Economics department, incorporated into the department a number of economists from the Mexican Government department of Economic Research and the Mexican National Bank. The experience of these men in current economic affairs in both Mexico and Latin America has served not only to improve the staff academically, but also to enhance the prestige of the department in the Mexican business world.

The department of Economics and Business Administration now grants the degrees of Bachelor of Arts with a major in Economics, Bachelor of Arts with a major in Business Administration, Master of Arts in Latin American studies with a major in Economics, and Master of Arts in Business Administration.

## THE INTERNATIONAL RELATIONS DEPARTMENT OF MEXICO CITY COLLEGE

In October of 1957, the Centro de Estudios Universitarios of Mexico City College entered its eleventh academic year. The recent emphasis on the importance of Mexico in the Western Hemisphere led to the decision of the administration, in 1950, to incorporate into the program of studies, a curriculum focused on international relations, under a group of men internationally minded and diplomatically trained.

Thus a curriculum of studies in international relations was initiated in the fall of 1951, under the direction of Licenciado Martirio Salvador de Alva, the present Mexican Ambassador to Peru.

### A HISTORY OF THE INTERNATIONAL

The program in international relations includes the basic required courses for all students who graduate from Mexico City College. It also includes additional training in English and a foreign language, as well as problems related to anthropology, economics, government, geography, psychology, and political science. The courses are designed to prepare the students to meet requirements for entrance into government service, international agencies, and teaching.

Students who combine this program of studies in international relations with the experience of living in Mexico City, being one of the great capitals of the world, acquire a background that would equip them for positions in any of these fields.

The courses are designed to prepare the students to meet requirements for entrance into government service, international agencies, and teaching.

Students who combine this program of studies in international relations with the experience of living in Mexico City, today one of the great capitals of the world, acquire a background that should equip them for positions in any of these fields.

## A HISTORY OF DELTA LAMBDA Upsilon

In the late spring of 1937, the Latin American Economics Society, with the approval of Mr. William E. Rodgers, director of the business department, and Mr. Paul V. Murray, president of the college, formed under the direction of Frank Phillips a committee to investigate the possibility of bringing a fraternity chapter to Mexico City College.

After much investigation and correspondence, the superiority of Delta Sigma Pi over other professional business fraternities became apparent. Further correspondence led to the visit of Mr. J. D. Thomson, Executive Director of Delta Sigma Pi, to Mexico City College where he met an enthusiastic group and discussed Delta Sigma Pi with the School Administration. The Latin American Economics Society

### A HISTORY OF DELTA LAMBDA Upsilon

meeting of October 13, 1937, was devoted to a discussion and explanation of Delta Sigma Pi and its functions. The responsibility of the local chapter officers was detailed so that the elections would be on the highest plane possible.

The first organization meeting of the proposed fraternity was held on October 26, 1937. This meeting was open to all freshmen, sophomores, juniors, seniors, and graduate students with majors in business administration, economics, and international relations. At this meeting, an election was held to select officers for the remainder of the academic year. Joseph S. La Casca was elected president, Anthony O'Donnell as senior vice president, Raymond Bell as vice president, Stanley Fuzess as treasurer, and Anthony S.

## A HISTORY OF DELTA LAMBDA Upsilon

In the late spring of 1957, the Latin American Economics Society, with the approval of Mr. William E. Rodgers, director of the business department, and Dr. Paul V. Murray, president of the college, formed under the direction of Frank Phillips a committee to investigate the possibility of bringing a fraternity chapter to Mexico City College.

After much investigation and correspondence, the superiority of Delta Sigma Pi over other professional business fraternities became apparent. Further correspondence led to the visit of Mr. J. D. Thomson, Executive Director of Delta Sigma Pi, to Mexico City College where he met an enthusiastic group and discussed Delta Sigma Pi with the School Administration. The Latin American Economics Society meeting of October 18, 1957, was devoted to a discussion and explanation of Delta Sigma Pi and its functions. The responsibility of the local chapter officers was detailed so that the elections would be on the highest plane possible.

The first organization meeting of the proposed fraternity was held on October 24, 1957. This meeting was open to all freshmen, sophomore, junior, senior, and graduate students with majors in business administration, economics, and international relations. At this meeting, an election was held to select officers for the remainder of the academic year. Joseph S. La Cascia was elected president, Anthony O'Donnell as senior vice president, Raymond Ball as vice president, Stanley Furman as treasurer, and Anthony S.

Rodriguez as secretary.

Mr. William E. Rodgers, chairman and director of the department of Business Administration, was designated as the faculty advisor for Delta Lambda Upsilon.

At the close of the meeting, membership applications were accepted from those who had not applied previously.

A nominating committee was established and assumed the duty of verifying the applicants' compliance with academic and attendance requirements.

On October 28, 1957, the fraternity accepted the constitution and by-laws of Delta Sigma Pi. Robert's Rules of Order were accepted as the method by which the weekly meetings were to be conducted.

On November 19, 1957, it was announced that the fraternity's charter was accepted by the Student Council and that Delta Lambda Upsilon was fully chartered and recognized as a business fraternity on the Mexico City College campus.

On November 29, 1957, the membership heard an address by the Ambassador from the United States to Mexico, the Honorable Mr. Hill, at the American Club.

On December 6, 1957, a formal dinner was held by Delta Lambda Upsilon at the Continental Hilton. Two prominent business executives in the Capital-Mr. Henry Soderberg, President of Vendro, S.A., and Doctor Edmundo Flores, an economist in the Department of Treasury and faculty member of the University of Mexico, were guest speakers. Mr. Soderberg spoke on "Life of the Businessman in Mexico", and Doctor Flores on "Investments in Mexico".

# Business Fraternity Organizes on Campus

With a membership of 40 students, Delta Lambda Upsilon, a new business fraternity on campus, hopes soon to become a chapter of Delta Sigma Pi.

Recently elected officers are Joe LaCascia, president; Tony O'Donnell, senior vice-president; Ray Ball, vice-president; Stanley Furman, treasurer; and Tony Rodríguez, secretary.

**Delta Sigma Pi** is a professional fraternity in the field of commerce and business administration and was founded at New York University, School of Commerce, Accounts and Finances, on November 6, 1907, to foster the study of business in universities; to encourage scholarship, social activity, and the association of students for their mutual advancement by research and practice; to promote closer affiliation between the commercial world and students of commerce; and to further a high standard of commercial ethics and culture and the civic and commercial welfare of the community.

In order to be a candidate for Delta Lambda Upsilon one must be majoring in business administration, economics, international relations, or accounting. The candidate will be under observation for one quarter and pledged during the second quarter. A minimum 1.3 grade point average is required. He must have a satisfactory class attendance and attending the club meetings is mandatory.

Other prerequisites are high moral standards, good general im-

pression, participation in other school activities, and a willingness to work, especially in club activities.

**Credit for bringing** the club to MCC goes to Frank Phillips, president of the L.A.E.S., who began writing letters to different fraternities in the United States inquiring about their functions.

As a result of these letters, he was visited by J. D. Thomson, executive director of the Grand Chapter of Delta Sigma Pi, and was able to begin the work for the foundation of a chapter at MCC.

"Meetings are on Tuesdays at 2:00 in the Foreign Trade Center. Anyone interested may leave his name in the Foreign Trade office," states Tony O'Donnell, vice-president of the club.

## Mexico City College's Delta Lambda Upsilon Holds Dinner

Mexico City College's Delta Lambda Upsilon, the first fraternity to be organized in Latin America, held its inaugural dinner Friday evening at the Salon de Tesoros in Continental Hilton Hotel.

The fraternity, composed of students in business administration, economics and international relations, is at present petitioning for acceptance as a chapter of the international fraternity of Delta Sigma Pi, with headquarters in Oxford, Ohio.

The Delta Sigma Pi, founded at New York University, School of commerce, Accounts and Finance, on November 7, 1907, by Alexander F. Makay, Alfred Moysello, Harold V. Jacobs and H. Albert Tienken, of which Dr. Milton Eisenhower is an alumnus member, is professional fraternity organized to foster the study of business in universities; to encourage scholarships, social activity and the association of the students for their mutual advancement by research and practice.

Patterned along similar objectives, the Delta Lambda Upsilon was formed in Mexico City Colleges by business and economics students for the purpose of promoting closer affiliation between Latin America's commercial world and students of commerce, thus, to further enhance a high standard of commercial ethics and culture for the civic and

business welfare of the community. An approval of the fraternity's petition to the National Council will make the organization a chapter of the international fraternity.

The Upsilonians who gathered Friday evening for their first formal dinner had for their special guests, two prominent business executives in the Capital—Henry Soderberg, and Dr. Edmundo Flores, an economist in the Department of Agriculture. Soderberg spoke on "Life of Businessmen in Mexico", and Dr. Flores on "Investments in Mexico."

Upsilonian officers present at the gathering were Joseph La Cascia, president; Anthony O'Donnell, vice president; Roy Ball, vice president; Stanley Furman, treasurer; Anthony Rodriguez, secretary; George Ellege, historian; George William, business program chairman; Vincent Hogle, social affairs chairman, and Ted Grayno, correspondent.

Others present were Del Sheas-meyer, Lloyd Gaspar, Peter Schnabel, Paul Harvey, Frank Phillips, Jim Iv n, Richard Van Buren, Robert McDonald, Gerald Dean Woods, Charles Warne, Joe Condiotti, George Fox, Michael Johnson, Theodore Turner John Magac, Paul Melon, Euren Ket-tenshofen, Louis Jung, Earl Currier, Robert Miller and Manuel Zetina.

UPSILONIANS present at the Delta Lambda Upsilon's first formal fraternity dinner Friday evening at the Salón de Tesoros of Continental Hilton Hotel are shown above from left: Ted Grayno, Alfredo Ramos of Banco de México, Lloyd Gaspar and Peter Schnabel. The mariachis furnished the dinner music.

THE DELTA LAMBDA UPSILON of Mexico City College held its first formal dinner Friday evening at the Continental Hilton Hotel of which Henry Soderberg (third from left) and Dr. Edmundo Flores (at far right) were guest speakers. Photo includes Anthony O'Donnell, George Williams, and Joseph La Cascia, seated from left to right.
